Description

Low power driver LPD 2-50 is a linear current source with excellent properties for driving low power laser diodes. Current waveforms can be CW, pulsed, modulated or a combination with frequencies up to 50 kHz (square wave) and currents up to 2 A. An analog modulation input and a digital enable / trigger input can generate fast and clean pulses. An analog input and a potentiometer control the current set point. Both values are added and build the effective current set point. LPD 2-50 is small and compact and can be operated without heatsink ($P_{DISS} < 3.8$ W). A heatsink is required for $P_{DISS} > 3.8$ W.

Technical subjects to change without notice.
